# A Little Guy

Performer's guide

**PERFORMER ONLY**

**The effect.** A spectator draws a little stick figure on your phone. He comes to life, waves, walks across the page and produces the card they chose.

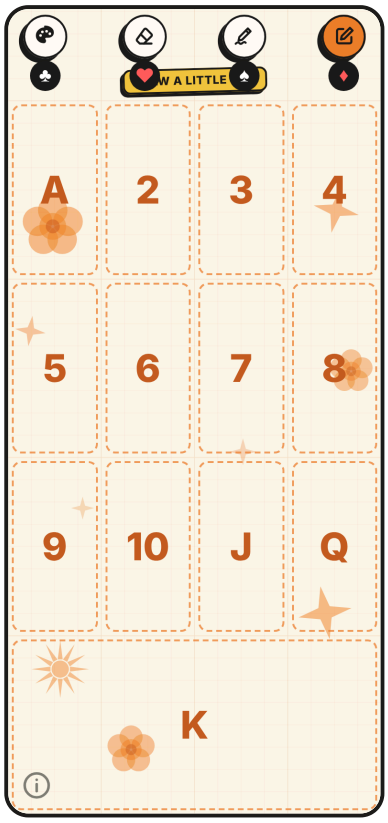

## The secret

The page is a hidden 4×4 grid. Each cell is a card **value**, and the whole bottom row is the King:

| | | | |
|---|---|---|---|
| A | 2 | 3 | 4 |
| 5 | 6 | 7 | 8 |
| 9 | 10 | J | Q |
| K | | | |

The four buttons along the top are the **suits**, left to right (CHaSeD):

♣ ♥ ♠ ♦

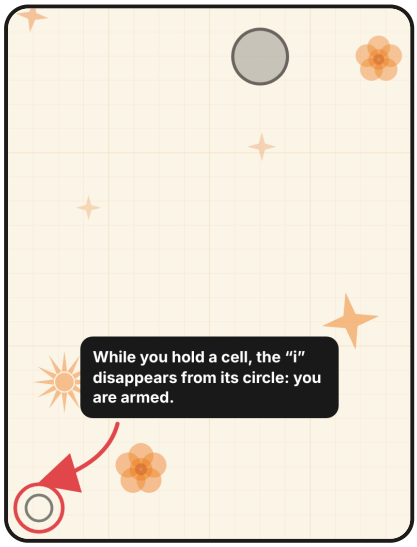

**The hidden grid and suit buttons**

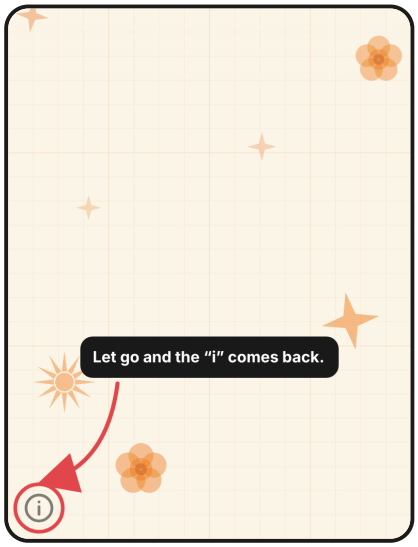

> Until you arm it, it's an ordinary drawing app. The buttons do what they look like (colours, eraser, pencil, new page), so anyone can play with it and nothing happens.

## Arming: the “i” is your signal

**Long-press** (about a second) the cell for the card's value. While you hold, the **“i” disappears** from the small circle in the bottom-left corner. That means it's armed. Let go and the “i” comes back. Nobody but you will notice.

**Holding a cell: the “i” disappears**

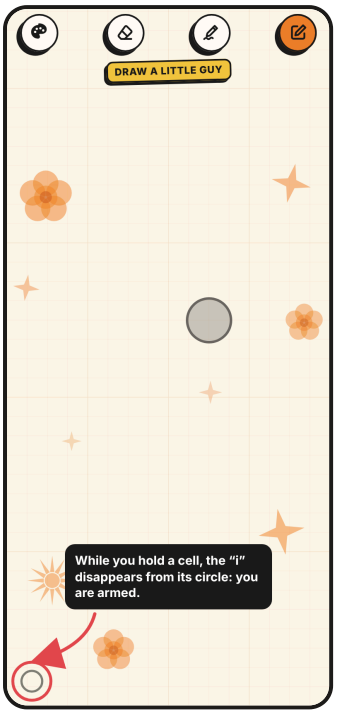

**Let go: the “i” comes back**

# Performing

Four steps, about 30 seconds

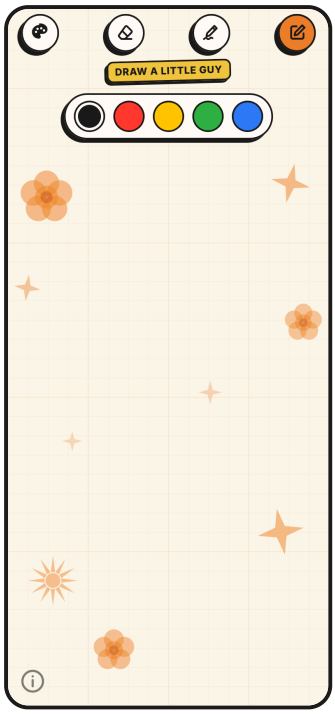

**PERFORMER ONLY**

### 1 Long-press the value

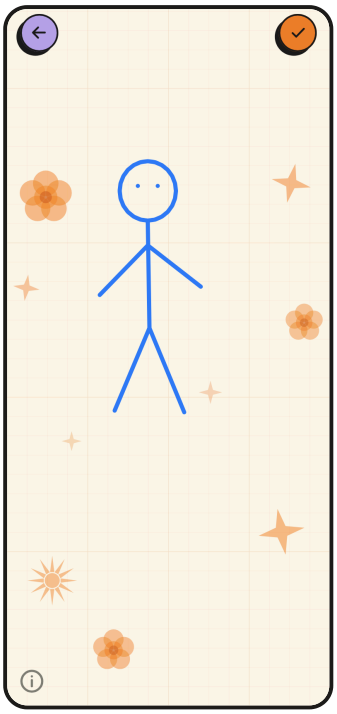

Learn the card (force or peek), then hold its cell until the “i” disappears.

### 2 Press the suit

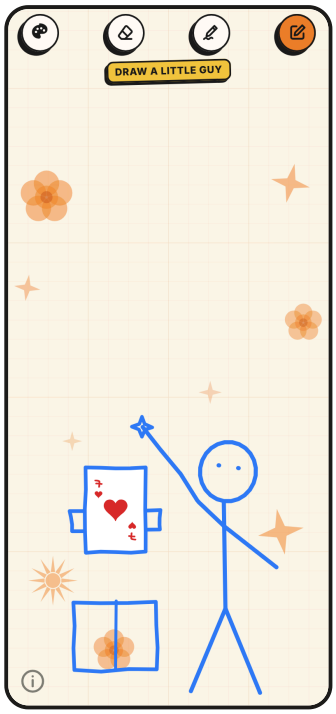

Tap the suit's button. A colour picker opens. “Pick a colour and draw a little guy.”

### 3 They draw

Hand over the phone. They draw a stick figure, eyes and smile welcome.

### 4 They tap ✓

About 4 seconds later he drops, waves, walks off and produces their card.

## Tips

- **Changing the value:** long-press again. The new value replaces the old one, and ordinary taps never change it.
- **One reveal per arm.** Hold again before the next performance.
- **The back arrow (←)** leaves the drawing without triggering anything.
- **To reset:** long-press the yellow ribbon and choose **New Page**.
- **Any drawing works:** if it isn't really a figure, it still produces the card, just moving as one piece.

## Forcing a card by link

Put the card right after the address, e.g. **draw.oddpaq.com/7D** for the 7♦. Extra characters after the card are ignored (**draw.oddpaq.com/7D90382sd** works too), so the link doesn't give it away. Use **A 2–10 J Q K** with **C H S D**. The code vanishes from the address bar as the page opens.

No input is needed: the buttons stay normal tools, and the next ✓ on a drawing reveals that card. After that one reveal it goes back to the long-press method.

---

The card is never saved anywhere: refreshing the page wipes it. Keep this guide away from spectators.
